

## **Open Letter**

to Ms. Greta Thunberg, Prof. Maja Göpel, Prof. Johan Rockström, Prof. Christian Callies, Prof. Graeme Maxton, Prof. Volker Quaschnig

and to all members of the IPCC, the Club of Rome, Science for Future and Fridays for Future.

This is an appeal to at once convene and constitute a

### **Planetary Council for Climate Emergency Action (PCCEA)**

- As scientists all over the world during more than 50 years have urgently asked the governments to start intensive action against the climate catastrophe and the extinction of global mankind – but nearly in vain –
- as the central demanded and in the Paris Agreement even decided action is the rapid and comprehensive transformation of global economy to a new fossil free and sustainable green fair economy system
- as the governments not at all fulfill the Paris Agreement but even massively act against it without being accused of crime against humanity and global genocide by the International Criminal Court
- as Ms. Greta Thunberg, Fridays for Future and people all over the world more and more urgently demand immediate climate action, climate justice and change of the current global suicidal economic system
- as more and more small, middle and cosmopolitan cities all over the world proclaim climate emergency
- as climate catastrophe now is at the brink to get out of any control
- as the annual COP conferences are not at all enough effective

it is absolutely high time to convene and constitute an international council of climate scientists and green economists, the

## **Planetary Council for Climate Emergency Action (PCCEA)**

to start most effective global climate emergency action:

- The members of this Planetary Council should first of all be members of the IPCC and the Club of Rome.
- Ms. Greta Thunberg, who internationally proclaims to urgently follow the advices of the climate scientists and to change the current global economic system to fight the climate catastrophe, should as well be member or even President of the Planetary Council.
- The Planetary Council could be situated for example at the PIK-Potsdam in Germany/Europe or another international climate research institute.
- The constitution of the Planetary Council could be officially approved and supported by the UN General Assembly and by the UN Secretary General António Guterres.
- The Planetary Council then decides and internationally proclaims the rapid and comprehensive transformation of global economy to a new fossil free and sustainable green fair economy system according to the Paris Agreement.
- The Planetary Council may decide for a global financial bail out for huge investments for renewable energy on a global scale to very quickly stop international fossil energy production, trade and emissions.
- The Planetary Council confronts every single government and specially the fossil, automotive, chemical, agricultural and air industry and their investors with their intended misdoing by acting against the Paris Agreement and ask the International Criminal Court to start investigations against them because of crime against humanity and global genocide.
- This way the (renewed) governments as well as (renewed) global industry and (renewed) investors will quite rapidly fulfill the comprehensive transformation of global economy to a new fossil free and sustainable green fair economy system according to the Paris Agreement.
- So the Planetary Council for Climate Emergency Action may very quickly push through the urgently needed change of the current global economy system to a sustainable green fair economy system to stop climate catastrophe and stabilize the elementary basis for human life and biodiversity on earth.

Please contact the board of the IPCC and the Club of Rome, organize within next weeks the first constitutional meeting of the Planetary Council for Climate Emergency Action (PCCEA) and contact the UN General Assembly and the UN Secretary General, António Guterres, for substantial support and approval.
